

Chapter 4

TECHNICAL BACKGROUND

System Flowchart

The system flowchart serves as a comprehensive visual representation that outlines the entire operation of the system. It is a critical tool that aids in understanding the intricate flow of operations within the system, providing a clear and concise overview of each step and how they interconnect. This flowchart is particularly designed for the Smart Coin-Operated Document Printing Using Raspberry Pi for University of Rizal System Cainta. It meticulously details the relationships between various components of the system, including inputs, outputs, and processes.

Admin Flowchart

Dataflow Diagram

The dataflow diagram represents how the data of the Smart Coin-Operated Document Printing Using Raspberry Pi for University of Rizal System Cainta flows, processes, and accessed by the users.
