INTRODUCTION

This project presents a user-centric Flashcard Maker Game developed within the MIT Inventory App framework. The application is designed to support modern learners by offering an interactive, customizable, and engaging approach to studying. By combining the classic effectiveness of flashcards with game-like elements and collaborative features, the app transforms traditional study methods into a more dynamic and personalized experience.

At its core, the Flashcard Maker Game allows users to create, manage, and review custom flashcards based on their specific learning objectives. Whether the content is academic, professional, or for personal development, the application provides flexibility in both content and format. The built-in quiz mode enables users to test their knowledge in a fun and interactive way, promoting active recall and long-term retention. By gamifying the learning process, the app helps reduce the monotony often associated with studying and encourages users to stay motivated.

Another key feature is the ability to explore flashcards created by other users, which fosters a sense of shared learning and provides access to a broader range of topics and perspectives. This not only enhances the learning experience but also encourages collaboration and discovery within the app's community.

Overall, this project was developed with the aim of making learning more effective, enjoyable, and accessible through the integration of personalization, interactivity, and community-driven content.

GENERAL and OBJECTIVES OF THE Mobile App Design

To develop a diverse and engaging mobile application that offers users across different genres and age groups. The app will serve as an entertainment hub and simulation, providing a user friendly quiz flash card game that help makes studying enjoyable and efficient for all users.

Specific Objectives

1. Develop a simple yet engaging flashcard system that allows users to create, customize, and manage flashcards for various subjects or topics.
2. Implement interactive quiz and memorization modes to assess knowledge and improve users' retention and recall of information.
3. Ensure easy content management by allowing users to add, edit, and delete flashcards to maintain accuracy and relevance.
